A Corrigendum on

Consensus-Based Core Set of Outcome Measures for Clinical Motor Rehabilitation After Stroke—A Delphi Study

by Pohl, J., Held, J. P. O., Verheyden, G., Alt Murphy, M., Engelter, S., Flöel, A., et al. (2020). *Front. Neurol.* 11:875. doi: 10.3389/fneur.2020.00875

In the original article, there was a mistake in **Table 2** as published. Important asterisks that were explained in the tables caption were not inserted in the table (second row, second and third columns). There is also an incorrect abbreviation (FMMA instead of FMA, in the second row, second column). The corrected **Table 2** appears below.

In the original article, there was a mistake in **Table 3** as published. Important footnotes (1) and (2), that were further explained in the table's caption, were not inserted in the table. The corrected **Table 3** appears below.

The authors apologize for these errors and state that they do not change the scientific conclusions of the article in any way. The original article has been updated.

TABLE 2 | Core set of outcome measures for clinical motor rehabilitation after stroke.

	Body functions	Activities	Participation
Upper extremity	FMA	ARAT	SIS
Lower extremity	FMA & 10MWT*	TUG* & BBS	SIS
ADL/ stroke-specific	NIHSS	BI/ FIM	SIS

*Measure only required for patients with a Function Ambulation Categories score of $\geq 3/5$. ADL, activities of daily living; ICF, International Classification of Functioning, Disability, and Health.

TABLE 3 | Measurement time points of the core set for clinical motor rehabilitation after stroke.

	d 2±1	d 7	wk 2	wk 4	wk 12	wk 26	+26 wks
Body functions	✓ (1)	✓ (1)	✓	✓	✓	✓	✓
Activities		✓ (2)	✓	✓	✓ (2)	✓	✓ (2)
Participation					✓		✓

✓, recommended time point for assessment; d, day; m, month; wk, week; (1) exceptional time points for the National Institutes of Health Stroke Scale, only indicated at these time points; (2) exceptional time points for the Barthel Index/Functional Independence Measure, only indicated at these time points.
